BasketStats

QUICK GUIDE

In-game basketball stats

Version 1.0 · October 2026 · English

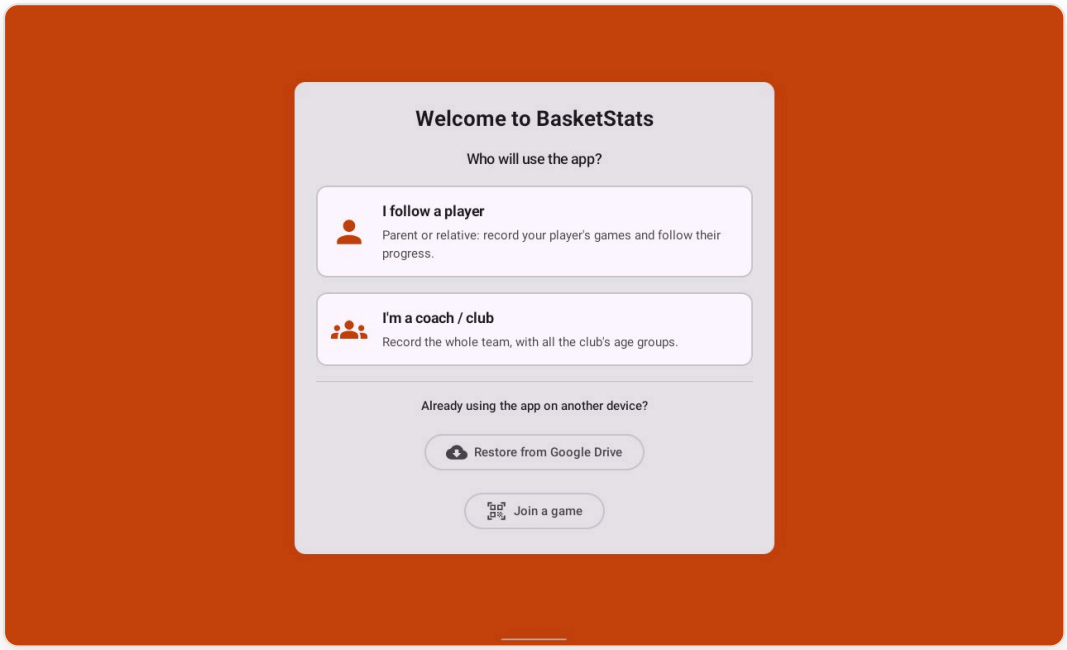

caldeiralabs.com

1 First launch

When you open the app, choose who will use it:

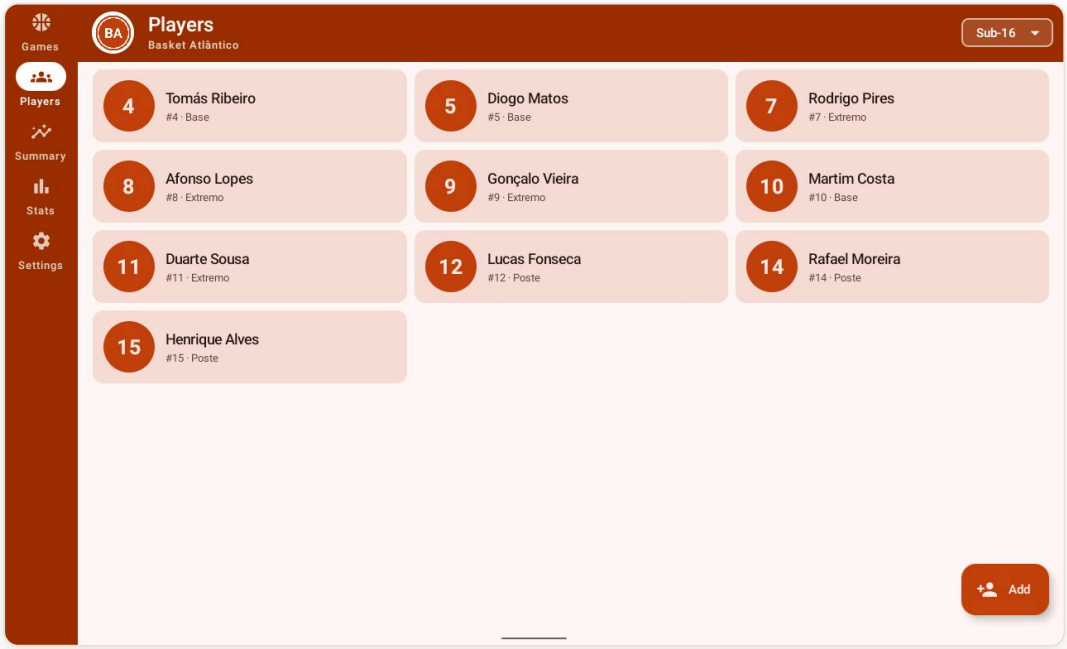

- **I follow a player**: parent or relative. You enter the player (name, number and photo) and their club.
- **I'm a coach / club**: you enter the club (the logo sets the app colours) and the first team (age group).

> **Tip:** Already using the app on another device? Tap “Restore from Google Drive”.

2 Add your players

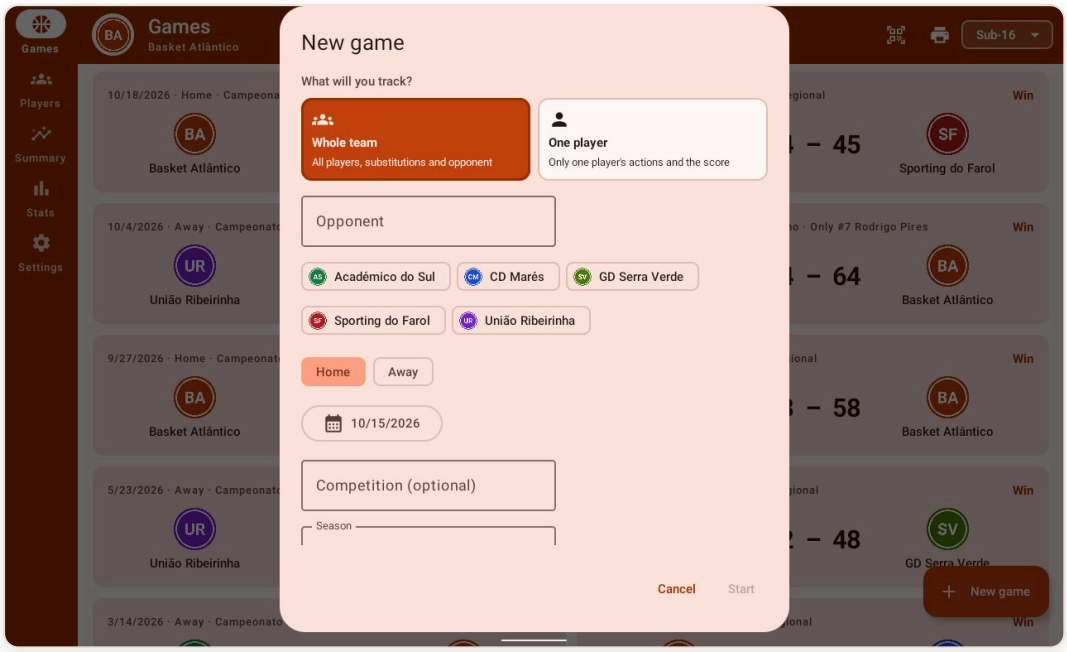

In the **Players** tab, tap **Add** and enter name, number, position and, optionally, a photo. You can have several teams (age groups) and switch team with the button in the top-right corner.

3 Create a game

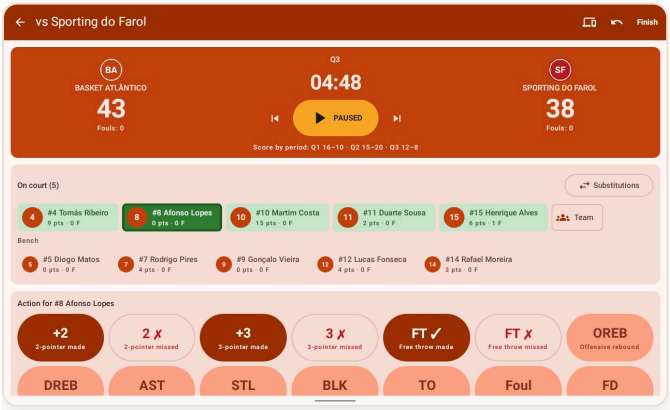

In **Games** → **New game**, choose:

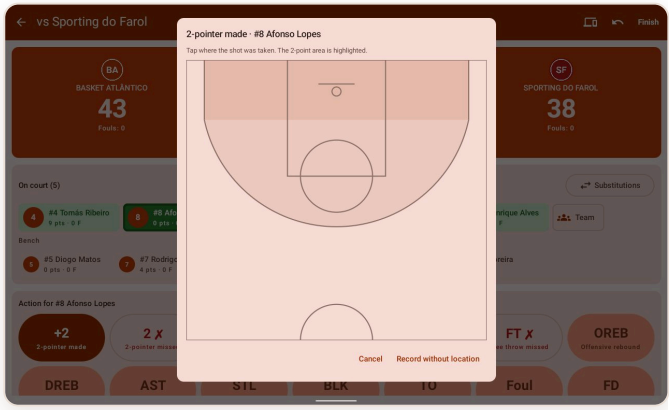

- **Whole team**: records every player, substitutions and the opponent.
- **One player**: only one player's actions and the score.
- The opponent, home or away, date, competition, number of periods and minutes.

4 Record during the game

1. Tap the big clock button: **green** running, **yellow** paused, **red** stopped.
2. Tap the **player**, then the **action** (+2, 2 ✗, OREB, AST…).
3. For shots, tap where on the half court the shot was taken, or “Record without location”.
4. Every entry shows a confirmation with **Undo**, so you can fix a mistake straight away.

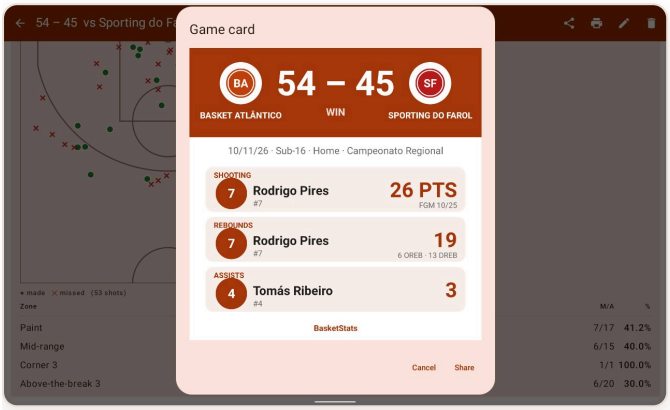

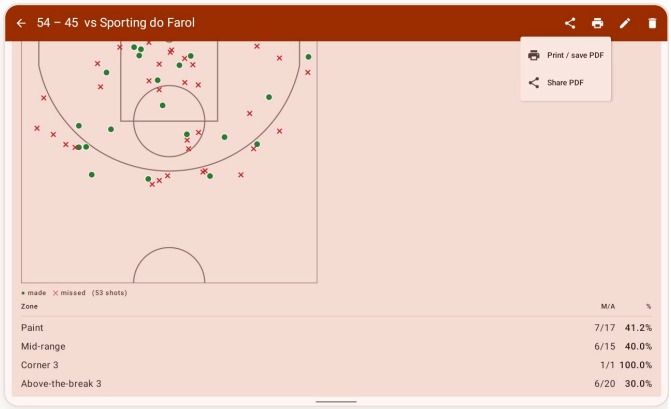

5 Finish and share

Tap **Finish**. On the box score:

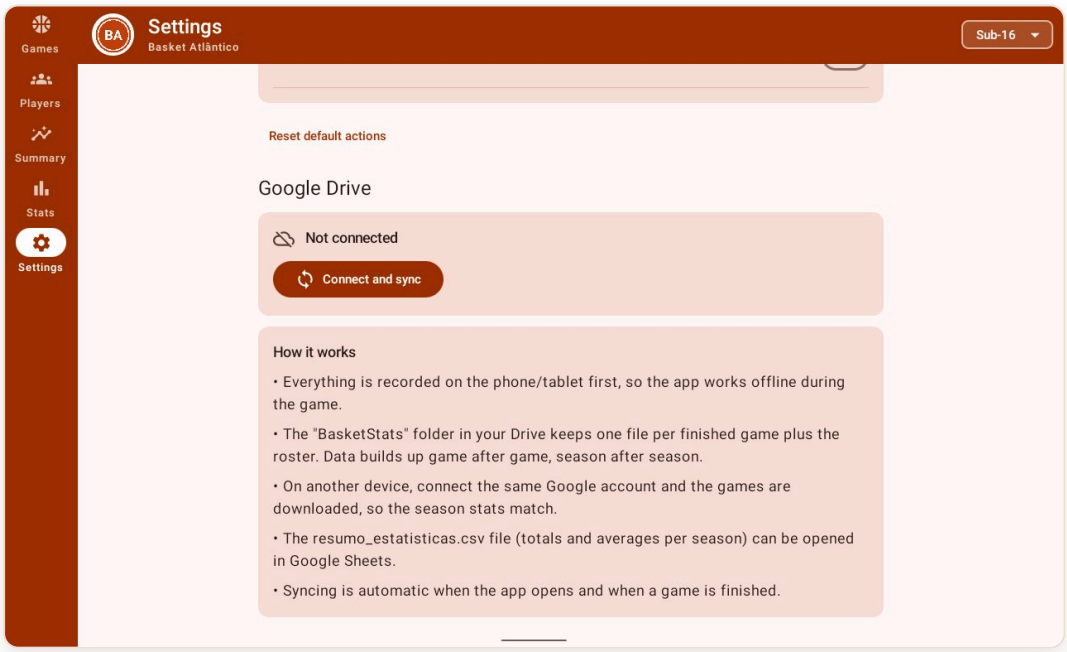

- **Share** (share icon): a game card image, ready for WhatsApp or Instagram.
- **Printer** → **Share PDF**: the full A4 box score to send by email or WhatsApp.

6 Save to Google Drive

In **Settings** → **Connect and sync**, pick your Google account. Games are saved in a “BasketStats” folder in your Drive and can be restored on another device. It works offline during the game and syncs when there is a connection.
