1 Introduction

BasketStats records the stats of a basketball game while it is played and adds them up over the season, for each player and for the team.

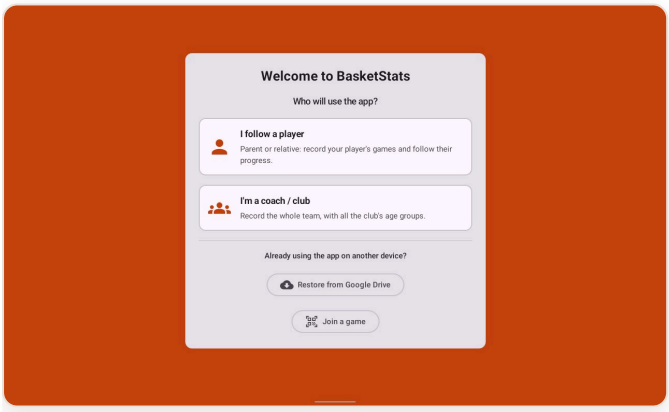

It works in two ways: **whole team** (coaches and clubs) or **one player** (parents and relatives following a player). Single-player games also count towards that player's stats.

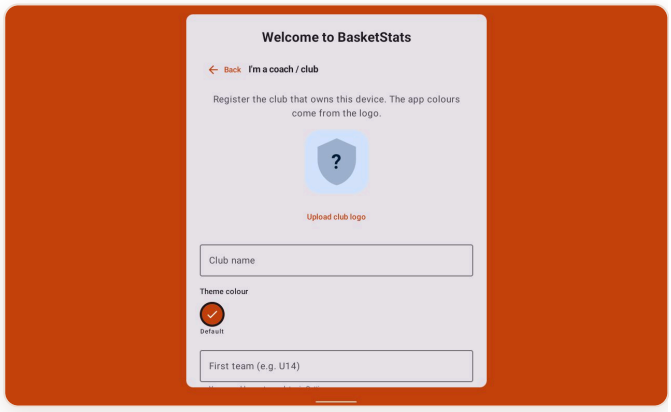

Everything is saved on the device first, so the app works offline during the game. If you want, it backs up to your own Google Drive.

2 First launch

On first launch the app asks who will use it.

- **I follow a player**: enter the player's name, number and photo, their club (with logo, optional) and age group. New games start in “One player” mode.
- **I'm a coach / club**: enter the club name and logo. The app colours come from the logo; you can pick another colour. Also enter the first team (for example, U14).
- **Restore from Google Drive**: for people already using the app on another device.
- **Join a game**: to use this device only as a secondary device in another device's game (see “Multi-device recording”).

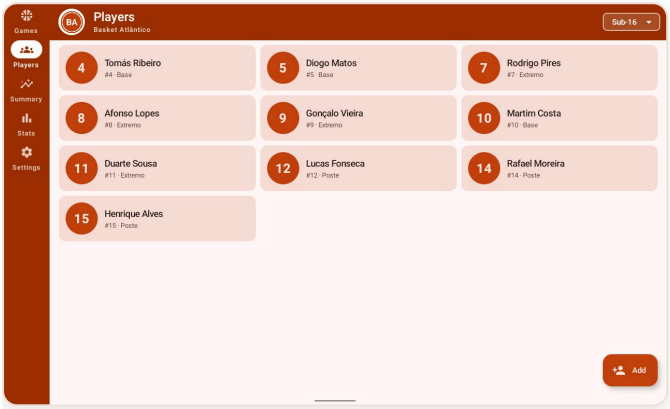

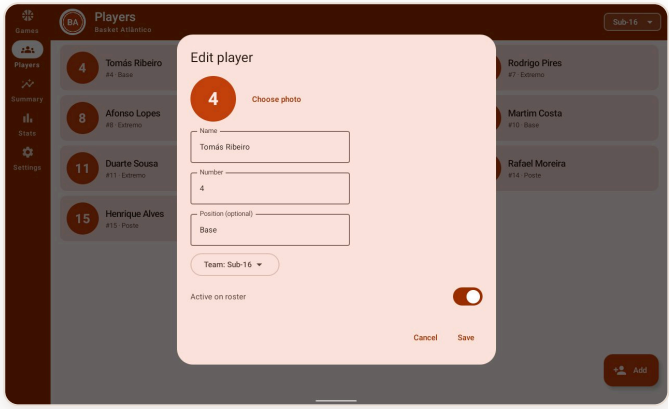

3 Club, teams and players

In the **Players** tab you add and edit the players of the active team: name, number, position, photo and whether they are active on the roster. An inactive player no longer appears in new games but keeps their history.

In **Settings** → **Club and teams** you change the club name, logo and colour, create teams (age groups) and manage the opponents list with their logos.

Pick the active team with the button in the top-right corner; every tab shows only that team's data.

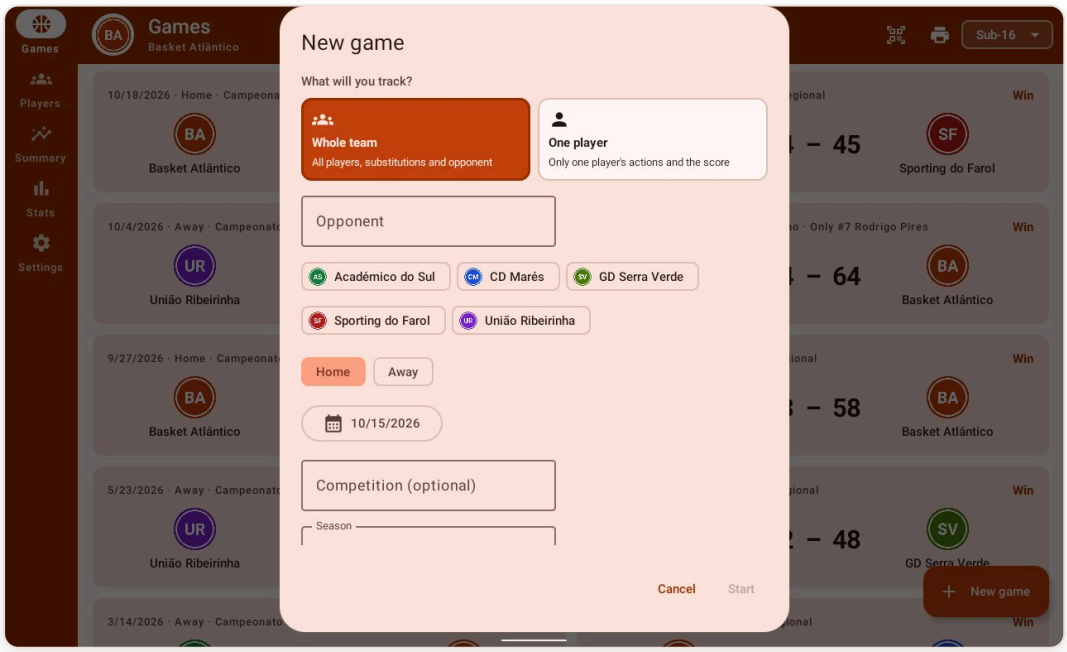

4 Create a game

- **What will you track**: “Whole team” or “One player” (then pick the player).
- **Opponent**: type the name or tap a suggestion; a new name is added to the opponents list.
- **Home / Away**, **date**, **competition** (optional) and **season** (filled in automatically).
- **Periods and minutes**: 4 periods of 10 minutes by default (FIBA rules).

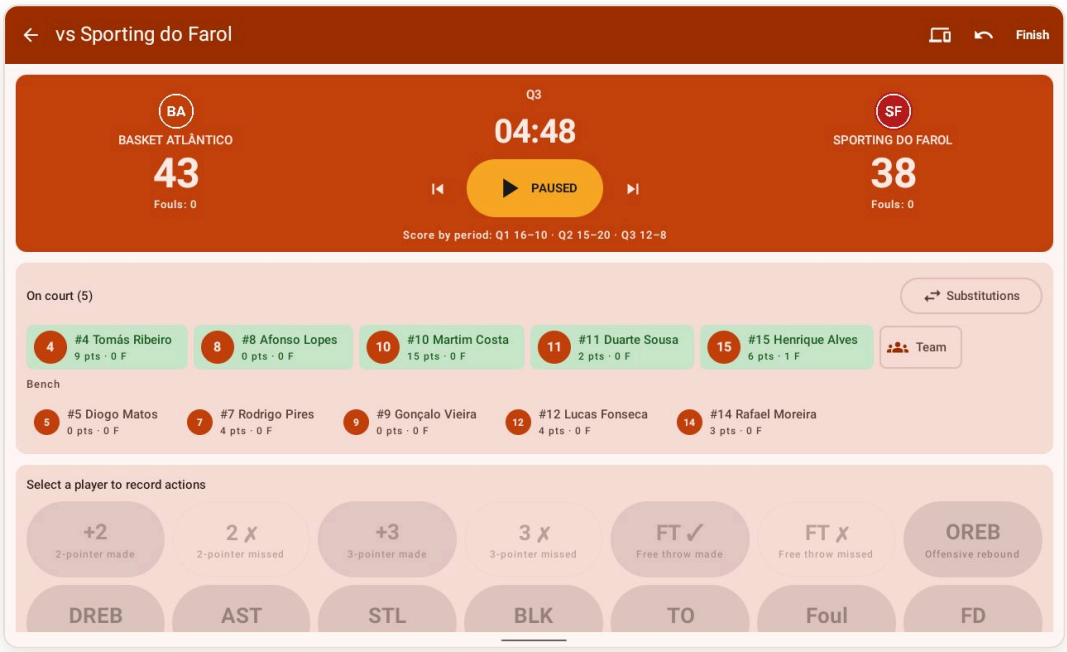

> **Tip:** In “Whole team” mode, the app asks for the starting five when the game begins.

5 Recording a game

From top to bottom, the game screen has: the scoreboard, the players, the action buttons, the opponent's actions and the play-by-play.

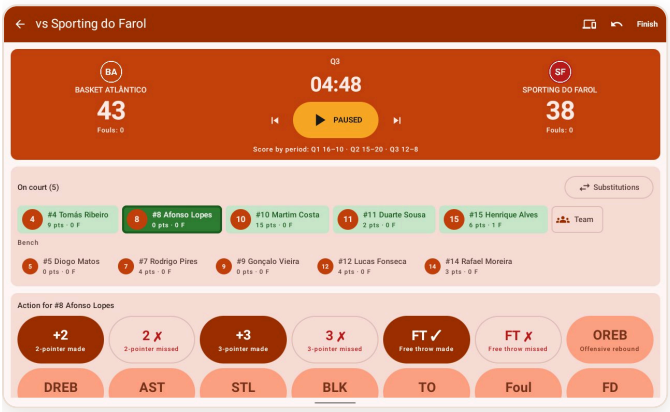

- **Clock**: the big button starts the time (green), pauses it (yellow) or shows it is stopped (red). Tap the digits to set the time; the arrows change period.
- **Team fouls** per period, under the score, and the **score by period**.
- **Players on court** have a green background; the bench is below. The **Team** button records actions with no player (for example, a team rebound or a shot-clock turnover).

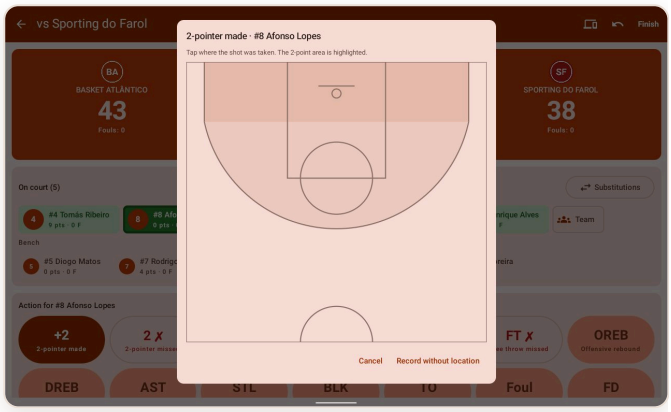

6 Actions and shots

1. Tap the player, then the action.
2. For field goals the half court opens with the right zone highlighted: tap where the shot was taken. If you tap a zone that does not match the button (for example, +3 inside the arc), the shot shows in yellow on the chart but counts as the button you chose.
3. A "✓ action · player" confirmation appears with an **Undo** button and the device vibrates.

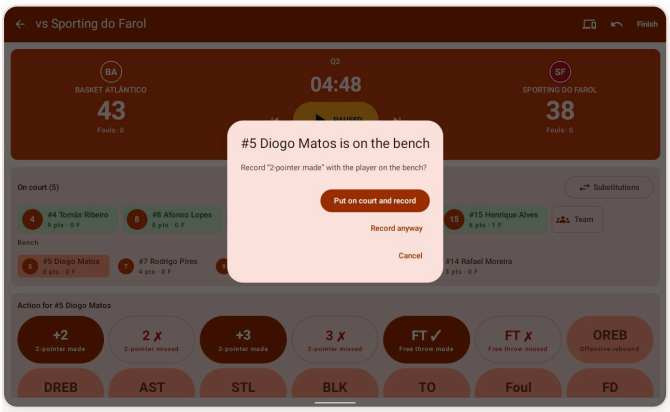

> **Tip:** Choose which actions appear, and their order, in Settings → Game and stats.

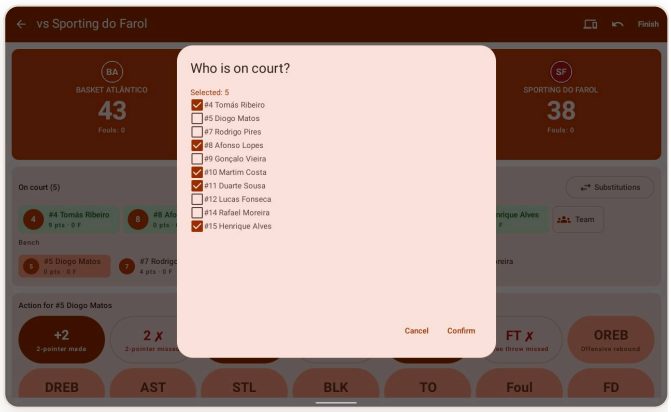

7 Warnings during the game

- **Clock stopped**: if you record an action while the clock is stopped, the confirmation turns red. Free throws and fouls do not warn, because they happen with the clock stopped.
- **Player on the bench**: the app asks before recording. "Put on court and record" makes the substitution and records; with five already on court, it opens substitutions with the player already selected.
- **Fouled out**: a player with 5 fouls (or 2 technical, 2 unsportsmanlike, or 1 of each) is shown as fouled out.
- **Substitutions**: tap "Substitutions" and tick who is on court.

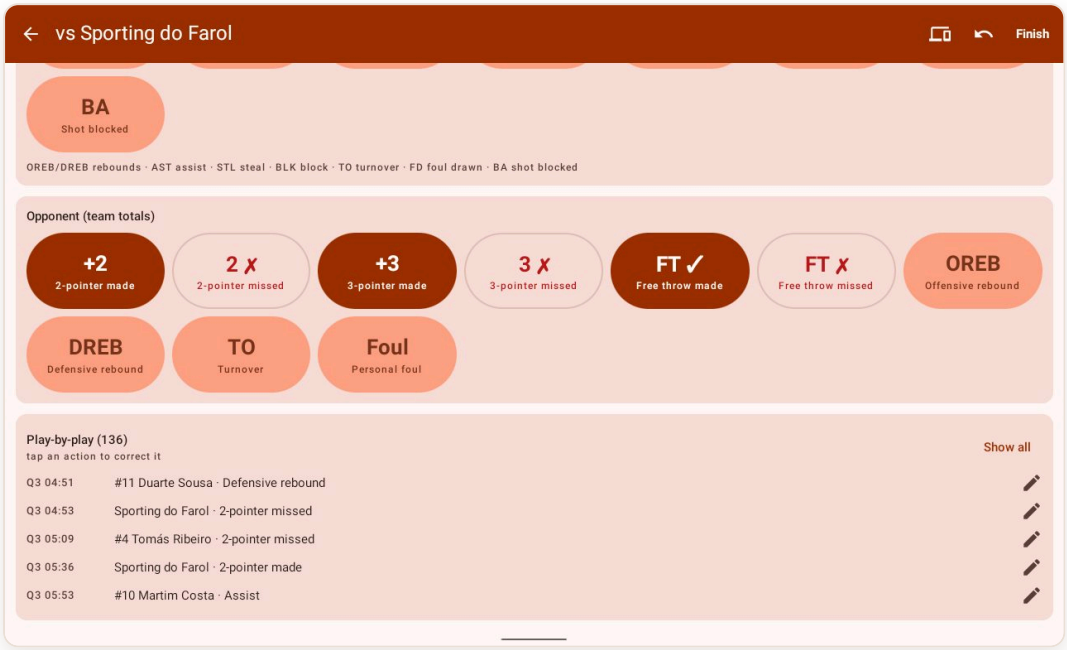

8 Opponent and play-by-play

The opponent buttons record the opposing team's totals (points, rebounds, turnovers, fouls).

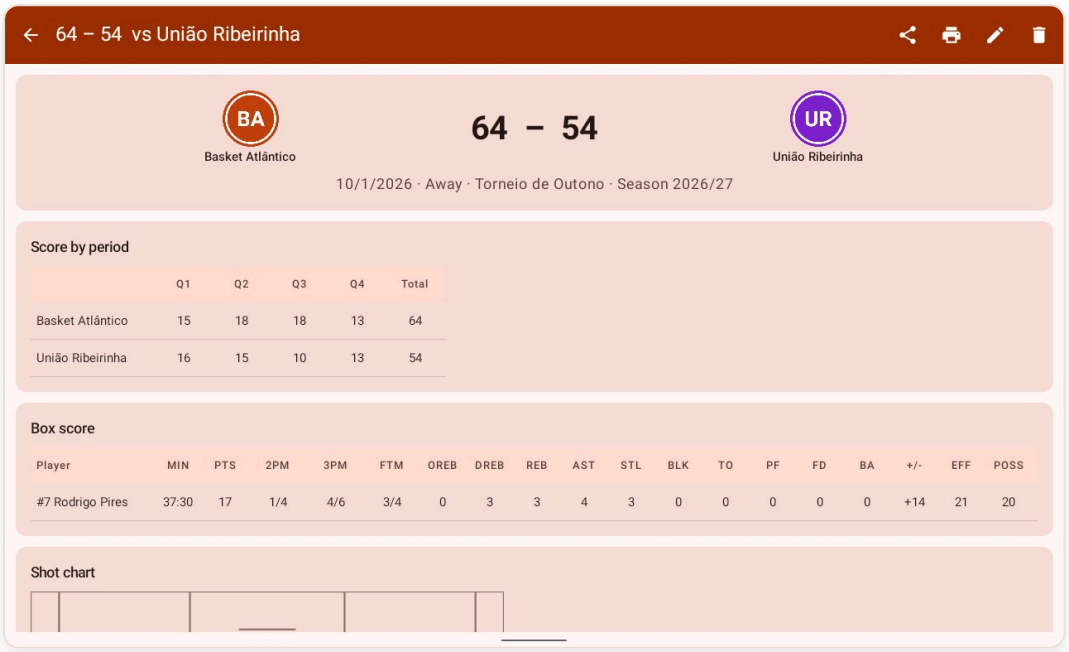

The **play-by-play** shows the latest actions with period and time. Tap an action to change its type or player, or to delete it. “Show all” lists the whole game.

9 “One player” mode

In this mode you record only one player's actions. The “On court / On bench” button counts minutes played. There are also three extra buttons:

- **Possession**: the player had the ball.
- **Pass ✓** and **Pass ✗**: completed and bad pass (a bad pass also counts as a turnover). Assists count as completed passes; rebounds and steals count as possessions.
- **Teammates'** and the **opponent's** points are recorded with the points buttons, so the score is right.

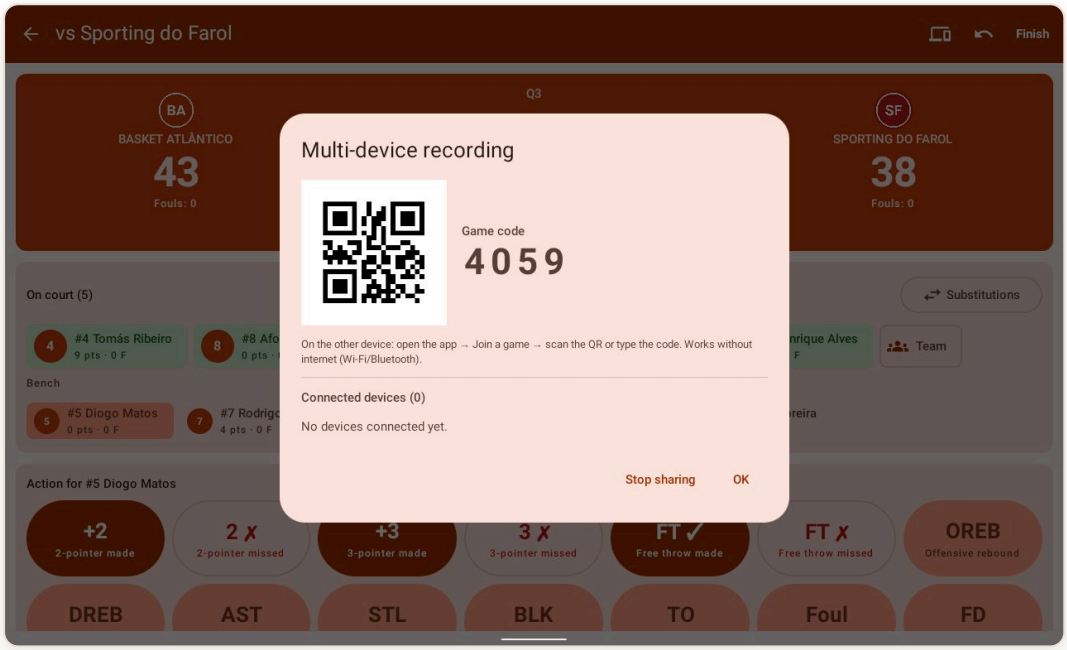

10 Multi-device recording

Several devices can record the same game at the same time, without internet (Wi-Fi/Bluetooth). For example, one assistant records passes and another rebounds.

1. On the main device, during the game, tap the **Devices** icon: a QR code and a 4-digit code appear.
2. On the other device, open the app and tap **Join a game**; scan the QR or type the code.
3. On the main device, choose which actions each device records. The secondary device only sees those buttons.

> **Tip:** Android asks for location to find nearby devices; the app does not use or store your location.

11 Box score

After you finish, the box score shows the result, the score by period, team shooting and each player's line: minutes, points, shots, rebounds, assists, steals, blocks, turnovers, fouls, +/- and efficiency (EFF, the FIBA formula).

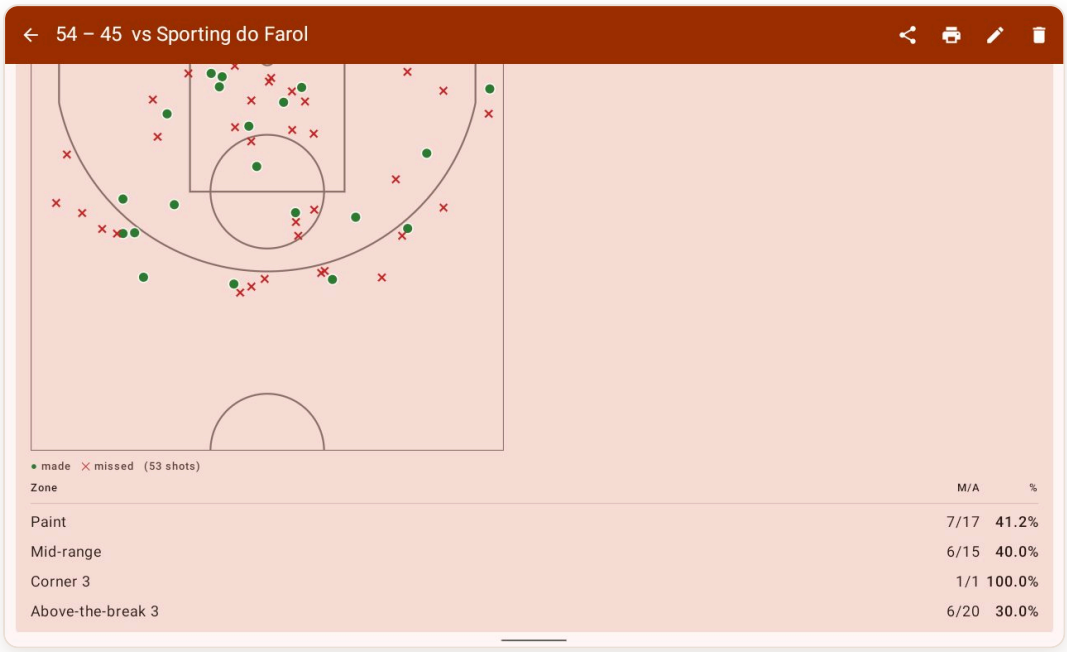

At the top you can **reopen the game to correct** it or **delete** it.

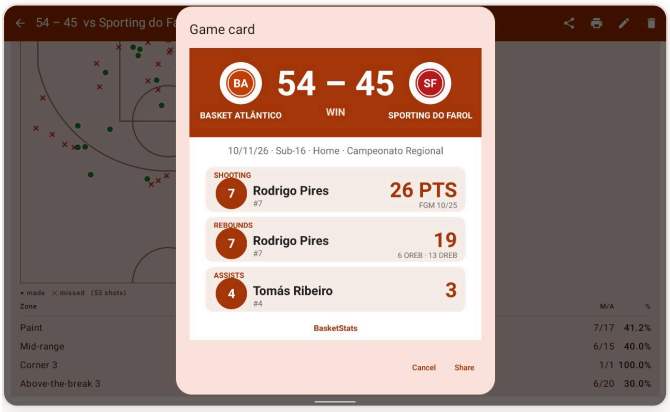

12 Shot chart

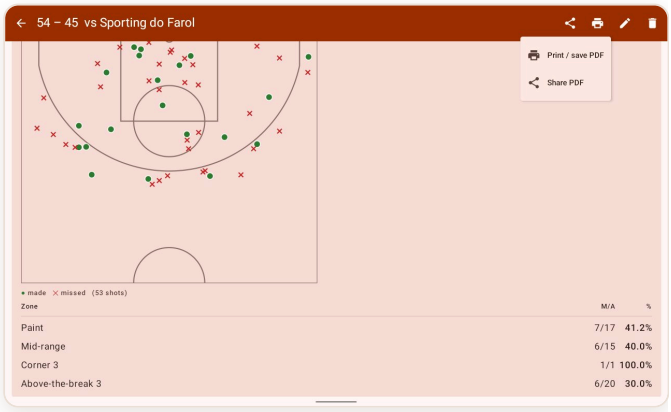

Each shot with a location appears on the half court: **green** made, **red** missed, **yellow** when the spot does not match the button. Below it, shooting by zone: paint, mid-range, corner 3 and above-the-break 3.

13 Sharing

- **Game card** (share icon): an image with the result and highlights. In team mode, the leaders in shooting, rebounds and assists; in one-player mode, the player's line and shot chart.
- **Printer**: “Print / save PDF” opens Android's print screen; “Share PDF” creates the report and opens the share menu.
- There are PDF reports for the box score, each player, the team and the results list.

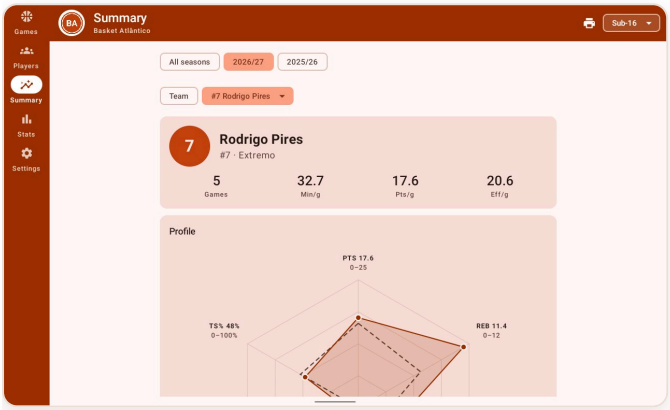

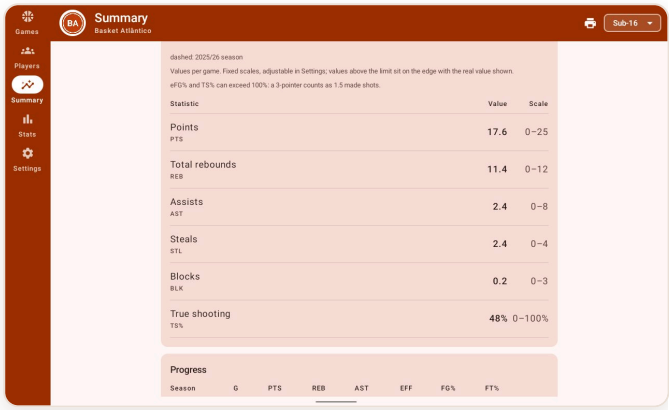

14 Summary

The **Summary** tab shows the team or a player on a radar chart, with per-game averages, for one season or all of them.

When you pick a season, the radar also shows the previous one **dashed**, so you can see where things improved.

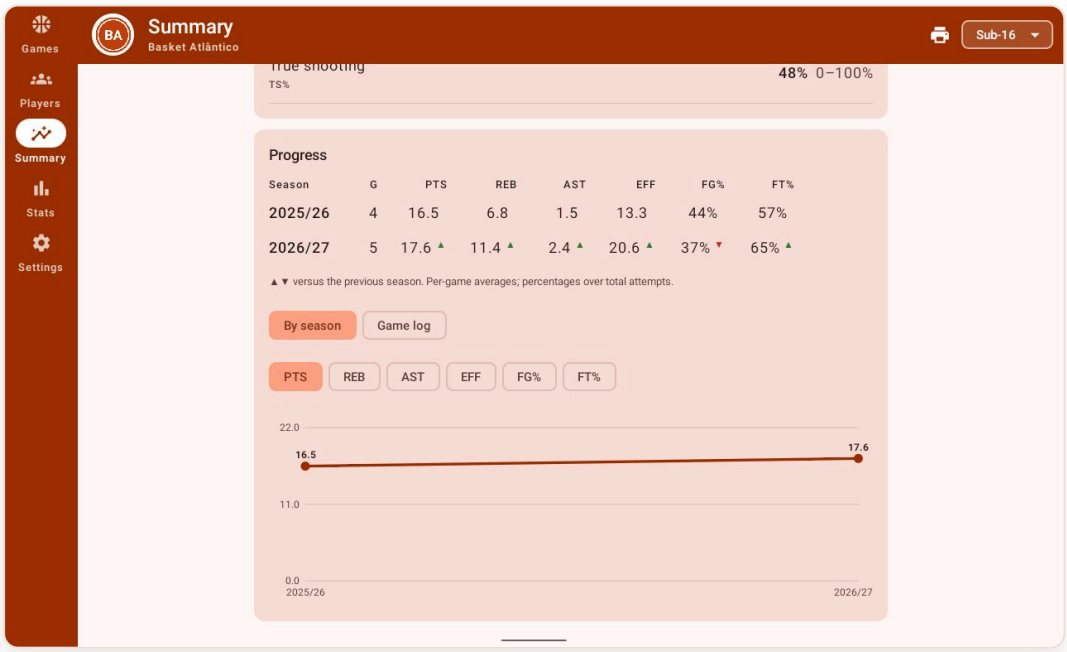

> **Tip:** Radar axes and scales are chosen in Settings.

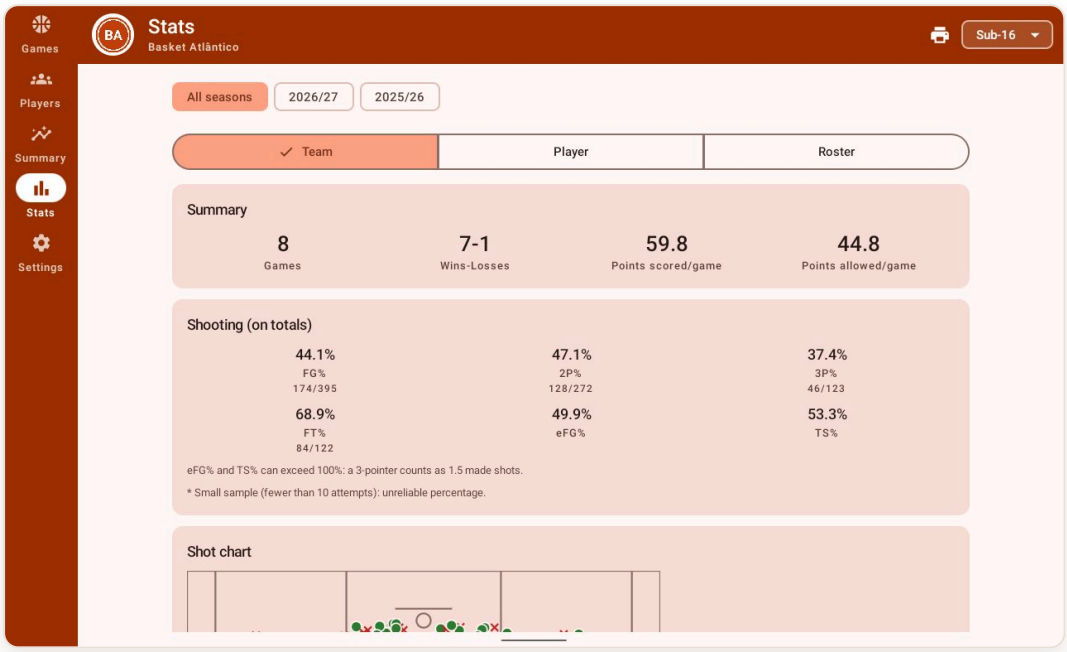

15 Progress across seasons

The table shows each season's averages with a green ▲ or red ▼ versus the previous one. The chart shows one stat by season or game by game. Percentages with fewer than 10 attempts carry an asterisk (*), because they are not reliable.

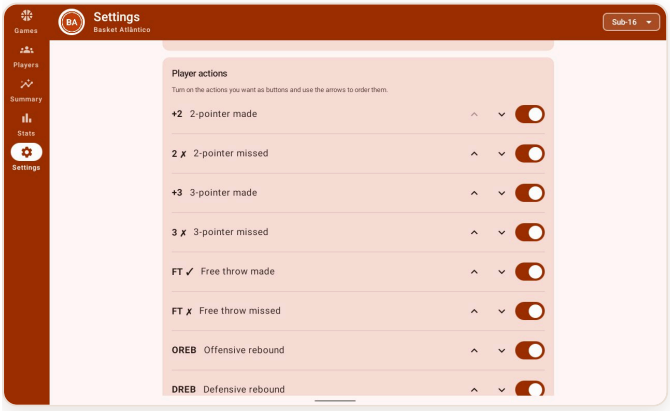

16 Stats

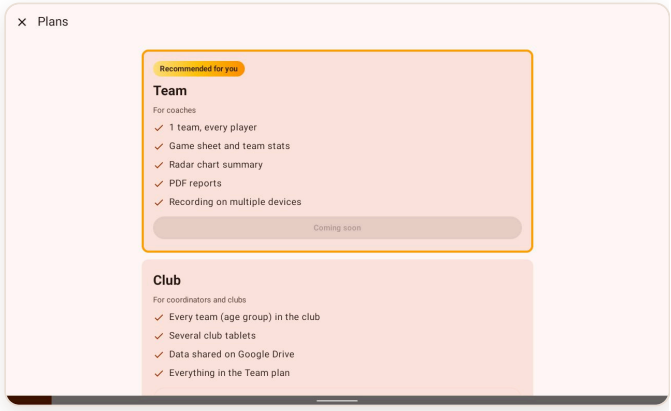

The **Stats** tab has totals, averages and highs for the team, each player and the whole roster, with percentages calculated over totals and the cumulative shot chart.

17 Settings

- **Club and teams**: name, logo, theme colour, teams and opponents.
- **Appearance**: light, dark or the same as the device.
- **Game and stats**: whether to ask for shot locations, radar axes and visible actions (turn on and reorder).
- **Google Drive**: connect, sync or disconnect the backup.
- **Plans**: the gold card at the top shows the available plans.

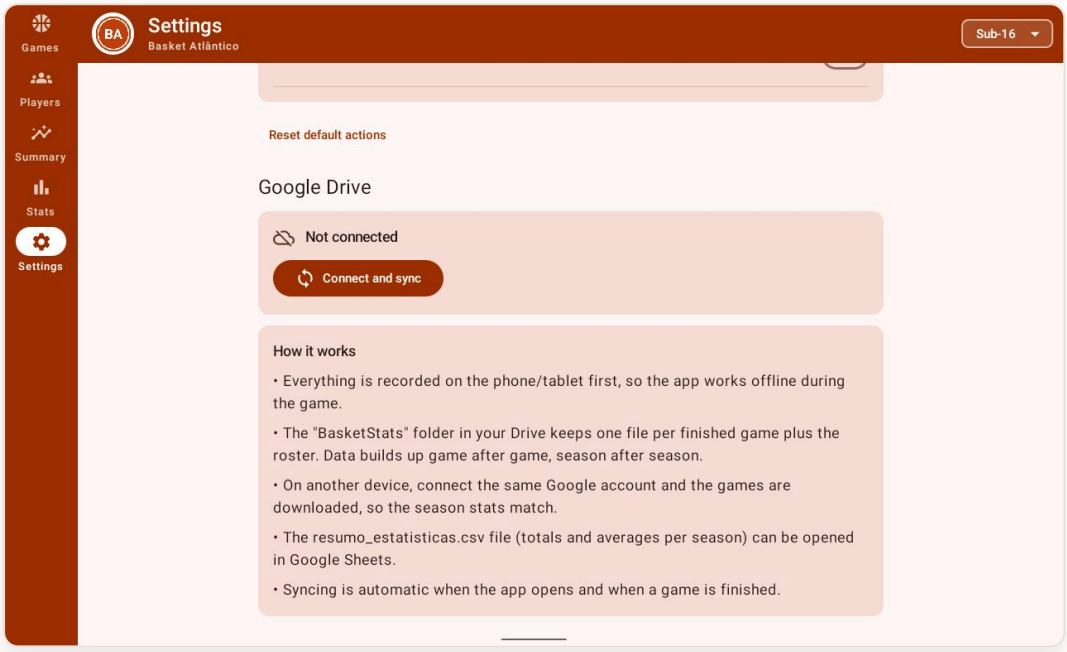

18 Google Drive

In **Settings** → **Connect and sync**, pick your Google account and allow access. The app only accesses files it creates itself, in a “BasketStats” folder in your Drive: one file per finished game, the roster and a CSV summary you can open in Google Sheets.

Sync happens automatically when you open the app and when a game finishes. On another device, connect the same account (or use “Restore from Google Drive” on first launch) and the games are downloaded.

19 Abbreviations

PTS	Points
MIN	Minutes played
2PM / 3PM	2- and 3-point field goals (made/attempted)
FTM	Free throws
FG%	Field goal percentage
OREB / DREB / REB	Offensive, defensive and total rebounds
AST	Assists
STL	Steals
BLK	Blocks
TO	Turnovers
PF / FD	Personal fouls / fouls drawn
BA	Shots blocked by the opponent
+/-	Point difference with the player on court
EFF	FIBA efficiency
eFG%	Effective field goal % (a three counts 1.5)
TS%	True shooting (includes free throws)
POSS / PASS	Possessions and passes (one-player mode)

20 FAQ

Do I need internet during the game?

No. Only the Google Drive backup needs a connection, and it syncs when there is one.

I made a mistake.

Tap “Undo” straight away. Later, tap the action in the play-by-play to fix or delete it, or reopen the finished game.

I changed tablets.

On the new device, choose “Restore from Google Drive” on first launch, with the same Google account.

Where is my data stored?

On your device and, if you turn it on, in your Google Drive. Caldeira Labs has no servers holding your data. See caldeiralabs.com/basketstats/privacy.
